Problem statement:

In this fast-growing world, it is very tough to shop things in adequate time. One of the problems like queuing in Bill counter which leads to wastage of our precious time.

Objective:

Our task is to solve the above-mentioned problem through **virtual store**. To make **virtual store,** we are going to attach sheets with photo and QR-code of products in public places. When people scan QR-code, they can able to buy products through the online which leads to reduce crowd in grocery stores, super markets, shopping malls.

Tools & Software:

1) Language: Java, XML.
2) IDE: Android Studio.
3) Version Control: Git
4) Backend: Firebase
